

Thinking skill	What to write
Decomposition	Break the code into Plant class, Zombie class, turn loop, and win conditions.
Pattern recognition	Each plant attacks one per turn. Zombie moves closer until distance is zero, then attacks.
Abstraction	Both plants will share one class, the only difference is the damage.
Algorithm design	1.) Plants attack in order 2.) Check if Zombie is defeated 3.) Zombie moves or attacks 4.) Check if both plants are defeated
